THE FLU AND ADULTS 50+

NOT GETTING VACCINATED COULD BE A GRAVE DECISION

A recent study showed that the rate of heart attacks increased 10x 1-3 days after flu infection.

In the 2017-2018 flu season, an estimated 3,400 adults 50+ were hospitalized every day.

And based on CDC estimates, on average 312 adults 50+ died every day from the flu and flu-related complications.

ASK ABOUT THE VACCINE THAT’S RIGHT FOR YOU
